

Hum ne Github pr code ko rakha hai trunk based branching strategy me..

1. Migration of Code from GitHub to Azure Repo
2. Code migrate ho gya to hame is code ko chalana hai...
3. Self Hosted Agent Azure DevOps me Online krna hai
4. Pipeline banana hai...

5. Pehle Classic then YAML

6. What is Azure DevOps?

Microsoft pehle isko TFS/VSTS Bolta tha fir ab rebrand kr dia and azure devops naam rakh dia..

Project management Tool - JIRA, Rally	Azure Board
SCM Tool - BitBucket, GitHub	Azure Repo
Pipeline(CI/CD) - Jenkins, TeamCity, Octopus	Azure Pipelines
Artifactory Management - Nexus, Jfrog,	Azure Artifacts
Test Cases - Junit	Azure Test Cases
Document - Confluence	Azure Wiki

Energy is limited..

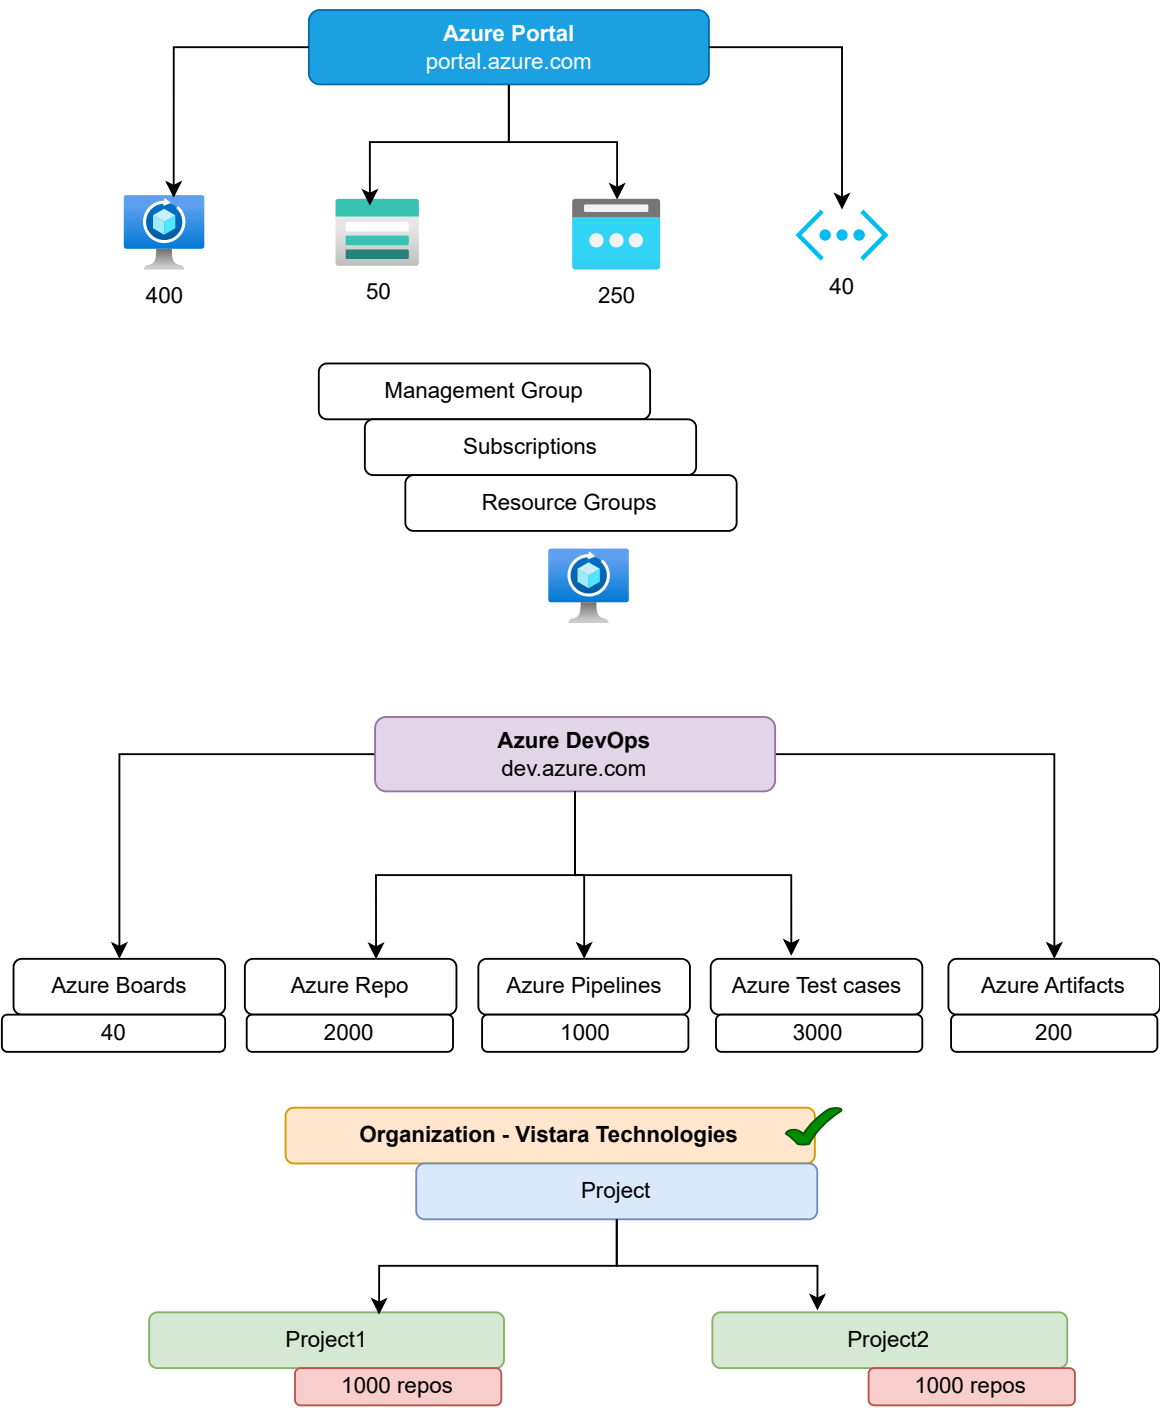

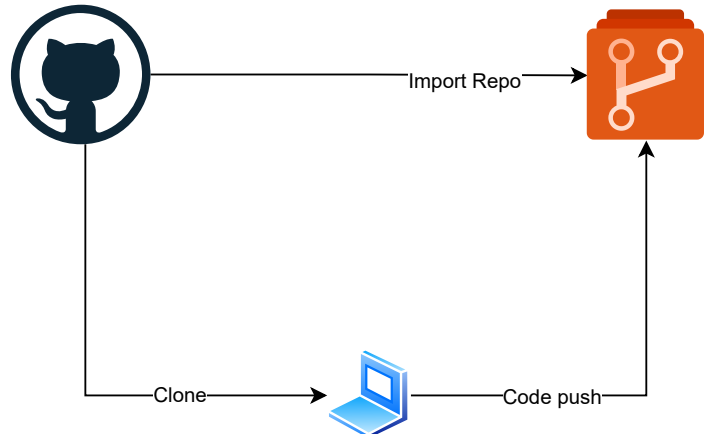

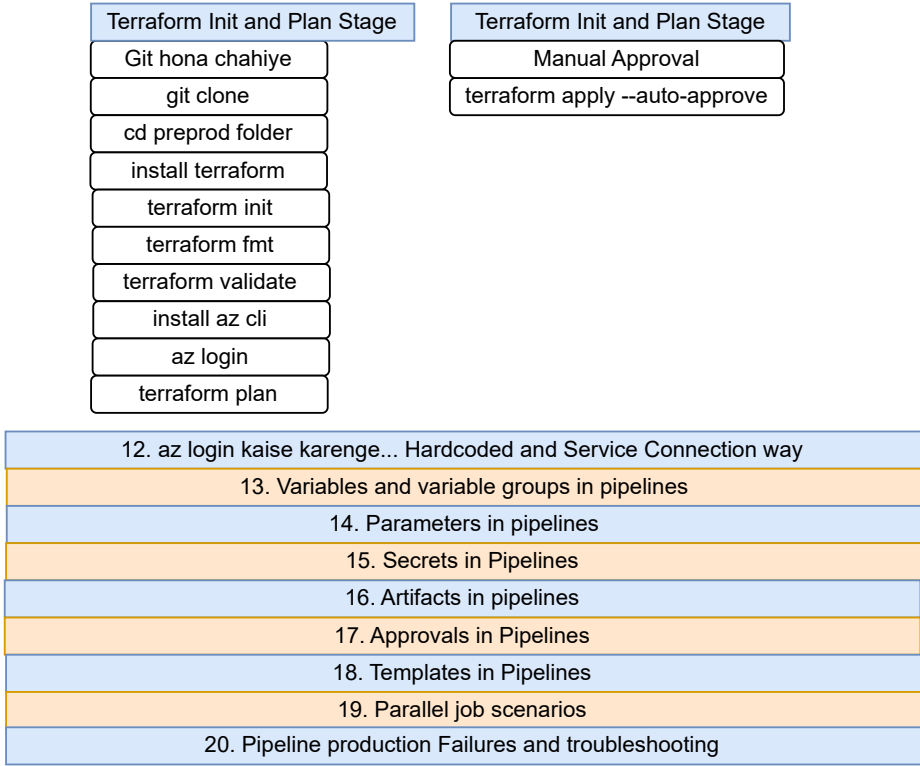

Azure DevOps ek software as a service hai... jisme ye upr wali sb chize club karke de dia..

How to access this?

Azure DevOps - dev.azure.com	Azure Portal - portal.azure.com
------------------------------	---------------------------------

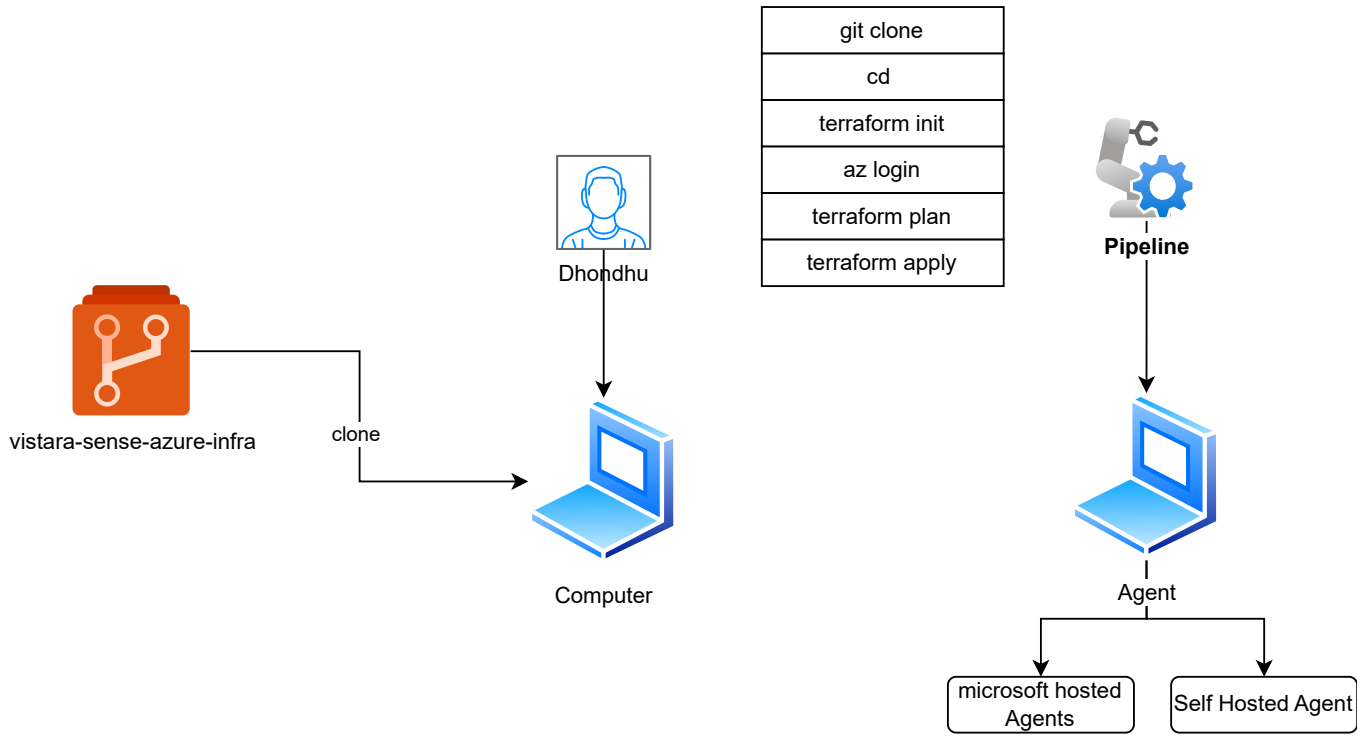

1. Sabse pehle azure devops pr account bana kr login karenge
 2. Create a new Azure DevOps Organization
 3. Create a new project inside the Organization
 7. Azure Repo me ek new Repository bananege..
- Kya aisa koi tarika hai jisse azure devops pipeline se github ko connect krde? Yes, Koi bhi SCM ko ADO se connect kr skte hai..
8. GitHub se Azure Repo me code ko set karenge
 9. Protection Policy in main branch
 10. Connect Self Hosted Agent on Azure DevOps (Apna computer)
 10. Agent ke saath Agent Pool padenge
 11. Classic and YAML Pipelines

4. Create Teams inside Project
5. Create User inside Team
6. Give Permission to Users/Teams

Vistara Sense - IOT monitoring System-> Room ki Monitoring Dashboard -

- Temperature 28.4°C
- Humidity 62%
- Light 740 lux
- Air Quality Good

- Home Work:
1. Set Azure DevOps Organization
 2. Create Project
 3. Create Azure Repo, Import or Push from Local
 4. Attach self hosted agent on azure devops
 5. Microsoft Hosted and Self Hosted Agent use
