

70% bolna, 20% sundr dikhna, 10% Technical

Apni recording bana ke rakh lo and din bhr 2-3 baar me sunte raho..

Har interview ko record karke sunke galtia nikalo.. ye krne se bahut jldi job ho jaega..

Jaise hi feature branch me code gaya, apne aap ek PR pipeline feature branch se chlana chahiye

Ye pipeline jb feature branch se chlega is pipeline me 2 stage hi chlega... Scan Stage, aur ek Plan Stage, 3rd apply wala stage nahi chlega.. kyuki humne pipeline ke code me ek condition dal rakha hai ki sirf main branch se hi teeno stage chale..

Jab tk ye pipeline bana nahi tb tk merge nahi kr skte..

Koi bhi automation ko krne se pehle manual steps dekhne pdte hai

Scanning wala task and plan wala task local me krna pdta toh kya karte?

IT ki naukri me do hi chize hai...

Point No. 1 - Ya toh **task complete kardo...** Task Complete bhi AI se krwa dalo..

nahi toh **justify krdo** kyu nhi kr pae.. Justify bhi AI se krwa dalo... haha

Point No.2 - Manager ko hmesha kaam pr lga ke rakho... Free mt rehne do.. Agar kuch kaam na ho toh boldo... onsite jana hai sir please bhjwado...

Point No.3 Paise mangne ke lie jitne ghar ki problem gina sako gina do.. Its not my greed, Its my need...

Prerequisites of Pipeline

All manual steps

0. Ek Computer Chahiye

1. Install Git

2. Install Terraform

3. Install az cli

4. Reader rights on subscription

5. Install VSCode

6. Install VS Code Extentions for all tools

7. Install kubectl

8. Access to GitHub and Clone in Local Computer in Folder Morgu

9. Lunch pe jane ke lie Windows + L se lock krke mast chle jao

10. az login done

11. terraform init, and terraform fmt, validate

12. terraform plan

13. terraform apply

14. feature branch se only till plan apply only in main
