

Terraform Installed	✓
VSCode Installed	✓
Terraform Extension in VSCode	✓
AZ Cli Installed	✓
Provider Installed (terraform code ke through)	
terraform init	
.terraform folder bana -> azurem.exe aa gya and .lock file aa gya	
terraform fmt -> code sundar kia	
terraform validate -> Syntax check	
az login	
terraform plan -> Kya kya bnega vo btaega?	
terraform apply -> Plan + Apply	
Jaise hi apply hua resource bn jaega	

Terraform me coding block se block mila kr hota hai
Block kya hota hai?
Block Types
1. anyword {} ye hai ek block
2. anyword "label1" {} ye hai ek block
3. anyword "label1" "label2" {} ye hai ek block
Ye code kon kon se block se banae hai?
terraform block (1 no. block)
required_block (1 no. block)
provider "azurerm" {} (2 no. block)
features {} (1 no. block)
resource "azurerm_rg" "rg" {} (3 no block)
Block ka input = arguments
Block ka output = Attribute

```

terraform {
  required_providers {
    azurerm = {
      source = "hashicorp/azurerm"
      version = "5.0.0"
    }
  }
}

provider "azurerm" {
  features {}
}

resource "azurerm_resource_group" "example" {
  name      = "example"
  location  = "West Europe"
}

```

Takeaway
Terraform me coding kaise hota hai?
Block kya hota hai and kitne type ke hote hai?
terraform init, fmt, validate ka kya kya kaam hai?
hum ko agar provider google se na lake jfrog/nexus se laan ho toh kaise krenge?
resource block, terraform block, provider block kya hota hai?
