

Ladne ke lie ek dum shant dimag chahiye

Politics sikh jao mast..

Code hi satya hai

Code = State = Azure Portal = Zero Drift State (Equilibrium State)

Terraform Init = .tf ko scan karke usme se provider wale block ko scan kia and .terraform me .exe le aaya
Terraform Plan = .tf ko scan krke resource block ko scan kra
Terraform Apply = Plan + Apply
Terraform apply chlne pr pehle portal pr banega fir state file me update hoga
First time state file me entry terraform apply chlne pr hoga..
Plan chlne ke pehle ek aur command chlta hai = Terraform refresh
Refresh = Azure portal and state ko equilibruim pr lana hai..
Plan = Terraform Refresh + Plan
Apply = Terraform Refresh + Plan + Apply

Scenario 1: Create a New RG

Code me naya block add kr denge, and apply chala denge..

Scenario 2: Delete RG block from Code

pehle portal se delte then state se delte

Scenario 3: Agr kuch modify kia to kya hoga?

destroy and create

Scenario 4: Delete RG in Azure Portal

Nadi Kinare saanp hai, terraform destroy chalana paap hai
