30% technology and 70 % way of explanation

50 chiz agar aap jante ho lekin agar rg explain nahi kr paa rahe properly, to kya fayda..

60 din ke andar me jo bhi sincere log milke sab aag lga denge..

Roj 100 company apply karo... din bhr apply apply krte jao..

Cloud Adoption Framework

1. Azure Landing Zone

Governance, Entra ID, Networking, Migration, Compute Workload, Monitoring, Backup, DR, Security, Cost Optimization

2. Terraform

Child Parent module, ForEach + Map of objects,dynamic block, conditional iterator, Optional Attribute, Data block, backend block, variable block, resource block, locals block, dependency

3. Code is ready

Source Code Management

Pehle ke jamane me chlta tha SVN, Bitkeeper, lekin sb me dard tha

git technology laya.. git ko use karke aap code ko SCM tools p rakh sakte ho branching strategy ke saath

1. Install git in your local machine.

Git based SCM tools:
GitHub, Azure Repos, AWS Code Commit, Google Cloud Source Repos, IBM DevOps Code, Bitbucket, Gitlab

Code push krne ke pehle ek strategy banate hai jisko bolte hai git branching strategy

Infrastructure code rakhne ki strategy ko bolte hai Trunk Based Branching Strategy.

Application ke code ko rakhne ke lie, Git flow branching Strategy use krte hai

Har project ka apna apna strategy ho skta hai..

Why Git?

Centralised and distributed version control system

Git Architecture and benefits of git

Git installation on windows

Repository Managment (git init, git clone, git status, git add, git commit, git log, git show, git restore)

Commit History

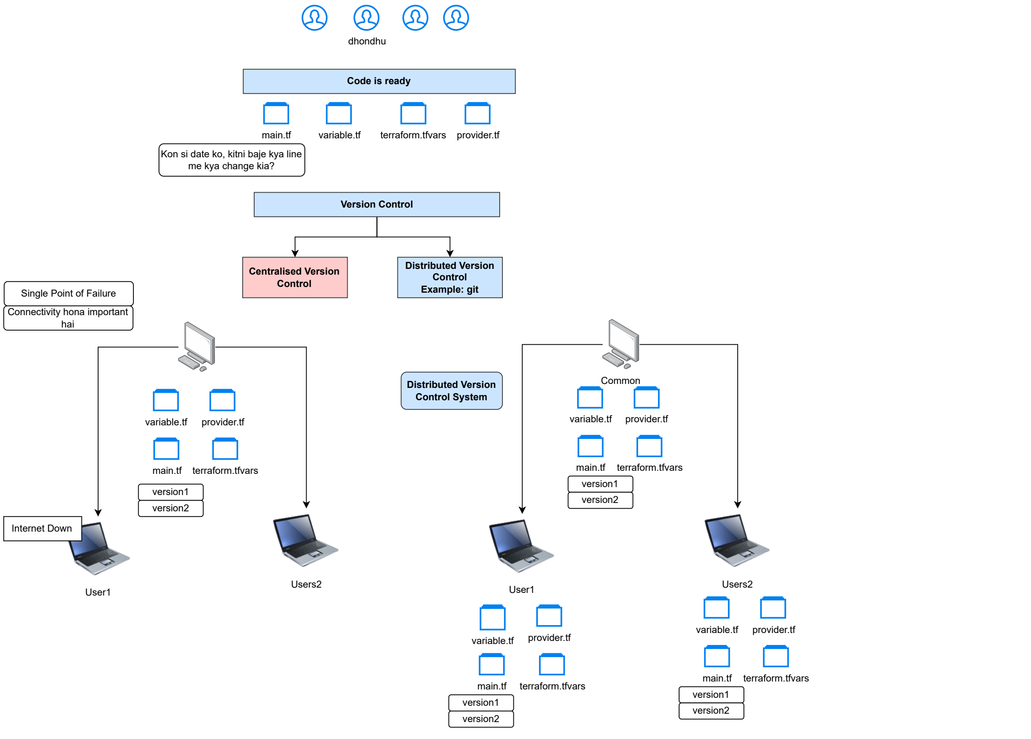
What is branch? (main, master, feature, release, etc..)

git branch, git checkout, git switch, git stash, git tag, git history, git chery-pick, git merge conflicts,

Pull Requests and Branch protection

Git Best Practices

Pull/ Push



Distributed Version Control System - git

Kisi bhi folder me files ke changes ko track krwane ke lie us folder ko git repository banana pdega..

Git is a distributed version control system, collaboration with the teams, tracks version history, rollback,branching, smooth development and deployment.

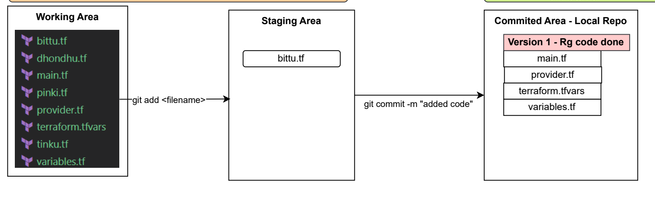
git init => hum ek folder me git ko bula skte hai

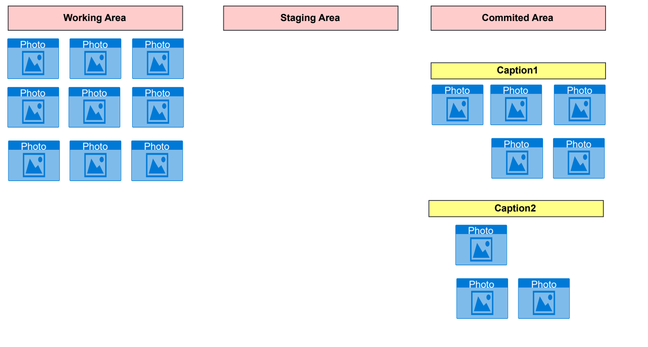
Jaise hi git folder me aata hai waha ek .git folder bn jata hai jisme git files ke changes ko manage krega

git log = commited area ki chize dikhata hai

git show = specific commit ki details dikhata hai

git status = Kitni file working area me hai and kitni file staging me hai?





Nadi kinare saanp hai and main branch me push krna maha paap hai
